

International Conference on Structural Integrity ICSI2027

Proposed Symposium

Research and education on the integrity of materials, components, and structures in cooperation between companies, research organisations and academia

Symposium Organisers:

Miloslav Kepka: kepkam@fst.zcu.cz

Tetjana Tomaskova: tomaskot@kmt.zcu.cz

University of West Bohemia in Pilsen, Czech Republic

Communication and cooperation between industrial enterprises, universities and research organisations are important for the development of knowledge and technical progress applied in practice.

While research organisations and academia are more often engaged in fundamental research, enterprises need to solve specific problems both at the stage of designing new structures and components and at the stage of their operation, or when solving and eliminating operational failures.

Contributions, ideally in the form of specific case studies, are welcome from all areas of industry (material science, mechanical engineering, civil engineering, electrotechnical engineering, etc.).

Contributions that address the collaboration in the education of technicians, engineers, and early-stage researchers are also welcome.

It is expected (not mandatory) that industry representatives will be members of the author teams.
